DETAILED OFFICE ACTION

Lack of Unity

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions that are not so linked as to form a single general inventive concept under PCT Rule 13.1. In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

- I. Claims 1-10, 11, 12, 16-20, 25-30, 39 and 41, drawn to substituted imidazo[1,2-b]pyridazine compounds of Formula I (Ex. 1), classified in class 544, subclass 236; pharmaceutical compositions, in class 514, subclass 248.
- II. Claims 1-10, 13, 14, 16-18, 21, 22, 25-30, 39 and 41, drawn to Formula I substituted imidazo[1,5-b]pyridazine compounds (Ex. 2), classified in class 544, subclass 238; pharmaceutical compositions, in class 514, subclass 248.
- III. Claims 1-10, 15-18, 23-30, 39 and 41, drawn to substituted [1,2,4]triazolo [4,3-b]pyridazine compounds of Formula I (Ex. 3), classified in class 544, subclass 236; and pharmaceutical compositions, classified in class 514, subclass 248.
- IV. Claims 1-10, 17, 18, 25-30, 39 and 41, drawn to all other compounds of Formula I, not provided for above, variously classified in classes 544 and 546, their pharmaceutical compositions, variously classified in class 514.

Each group set forth above lacks unity with each other group, i.e., there is no single general inventive concept. The unique special technical features in

Art Unit: 1624

each group are the identities in Formula I of the bicyclic nitrogen-containing ring. The technical relationship among the inventions does not involve at least one common or corresponding special technical feature. The expression "special technical feature" is defined as meaning those technical features that define the contribution which each claimed invention, considered as a whole, makes over the prior art. In this case, a reference that could be used to reject Formula I compounds, where the bicyclic ring is imidazo[1,2-b] pyridazine of Group I could not be used to reject compounds of Formula I, of any other of Groups II-IV.

Group I invention has special technical features not common to Groups II-IV and would be expected to be useful, e.g., as intermediates to substituted imidazo[1,2-b] pyridazines (US 2009 0176788, Falcó). Group II invention has special technical features not common to Groups I, III and IV and would be expected to be useful, e.g., as intermediates to P13 kinase inhibitors (US 2009 0163489, Booket, et al.). Group III invention has special technical features not common to Groups I, II and IV and would be expected to be useful, e.g., as intermediates to antivirals (US 2009 0170856, Billedeau, et al.).

To preserve a right to petition, the reply to this Office Action must distinctly and specifically point out supposed errors in the restriction requirement or the election will be treated as without traverse. If applicant traverses on the basis that the inventions are not patentably distinct, applicant should submit evidence, or identify evidence now of record, showing the inventions to be obvious variants or clearly admit this on the record. In either case, if the examiner finds one

Art Unit: 1624

invention unpatentable over the prior art, the evidence or admission may be used to reject the other invention under 35 USC 103(a).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
